

## **Appendix B – Public Health submission**

### Overall commentary on mapping work undertaken so far:

Data for 2018/19 for police recorded violence against the person offences which have occurred outside of the home, police recorded criminal damage offences, as well as noise complaints to the local authority regarding licensed premises all continue to show clear city centre hotspots which all sit within the current Cumulative Impact Zone and Special Stress Area boundary and support maintaining these boundaries.

Wards with the highest rate of adults in alcohol treatment are also focused in the city centre (Queen's park, Regency and St. Peter's and North Laine wards) and are further evidence for maintaining the current Cumulative Impact Zone and Special Stress area boundaries.

Data for alcohol related A&E attendances, alcohol related ambulance call-outs, and police recorded alcohol related incidents are currently outstanding, but we hope this will soon be available to help inform this work.

### Specific NTE commentary:

Specific analysis has been undertaken to look at police recorded violence against the person and sexual offences that have occurred within the Cumulative Impact Zone and Special Stress Area at times of day and days of the week that are most closely associated with the night-time economy.

Analysis of violence against the person offences that occurred outside of the home showed that there were 698 offences which occurred either within the CIZ or SSA between 10pm and 5am on a Friday and Saturday night in 2018/19. This compared with 775 offences in 2017/18, a reduction of 9.9%.

There were 74 sexual offences that occurred in either the CIZ or SSA area between 11pm and 6am on a Friday and Saturday night in 2018/19. This was an increase from 57 the previous year.
